PROJECTS

BLOCKCHAIN BASED PATIENT CENTRIC IMAGE MANAGEMENT

Duration : Three months

- Distributed image management system which uses IPFS for storage and blockchain for security.
- Patient can give access to his/her images based on his/her interest.
- Requestor can request for Patient's image based on the description of image
- We store patient's image on IPFS and its hash value on blockchain.

BRAIN TUMOR DETECTION AND CLASSIFICATION USING DEEP LEARNING MODELS

Duration : Four months

- This study proposes a deep learning-based model for brain tumor prediction using MRI images.
- Among six evaluated models, DenseNet-121 demonstrates the highest accuracy at 97.7%.
- The designed system serves as a reliable and user-friendly screening tool for early brain tumor detection, potentially improving patient survival rates.

EMPLOYEE PAYROLE MANAGEMENT SYSTEM - JAVA

Duration : One week

- Developed a Java application for managing employee payroll utilizing object-oriented principles.
- Implemented an abstract superclass 'Employee' and concrete subclasses 'FullTimeEmployee' and 'PartTimeEmployee' with polymorphic salary calculation.
- Utilized a 'PayrollSystem' class to handle employee addition, removal, and display functionalities with ArrayList data structure.
- Demonstrated proficiency in Java programming, abstraction, inheritance, and encapsulation.
